DETAILED ACTION

The amendment filed March 3, 2006 has been entered. Claims 31 and 33 have been amended. Claim 30 has been cancelled.

Accordingly, Claims 23, 27, 28, 31, and 33 are pending.

The rejection of Claim 30 under 35 U.S.C. 112, first paragraph, for lack of enablement, is withdrawn in view of the cancellation of this claim.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Timothy H. Van Dyke on March 27, 2006.

The application has been amended as follows:

In the Claims:

Claim 31 has been cancelled.

23. A method for producing a model for neurofibrillary pathology which comprises somatically transferring a viral vector comprising a gene encoding an aberrant form of a human tau protein comprising the P301L mutation associated with fronto-temporal dementia with Parkinson's linked to chromosome 17 (FTDP-17) ~~FTDP-17~~ into brain tissue of a living rat or mouse under conditions which result in the expression of said gene; wherein expression of said gene results in a neurofibrillary pathology in said living rat or mouse comprising at least one characteristic selected from the group consisting of abnormal accumulation of tau in neuronal cell bodies and dendrites, presence of filaments

immunoreactive for hyperphosphorylated tau, neuritic immunoreactivity with anti-neurofibrillary tangle antibody, and increase of reactive astrogliosis.

27. The method of claim 23, wherein said somatically transferring comprises injecting said viral vector gene into pre-selected areas of the brain of said living rat or mouse.

33. A method for inducing behavioral changes in a living rat or mouse which comprises somatically transferring an adeno-associated viral vector comprising a gene encoding an aberrant form of human tau protein comprising the P301L mutation associated with FTDP-17 directly into nigrostriatal neurons, septalhippocampal neurons, or both, in the brain of said living rat or mouse, wherein said somatically transferring said viral vector ~~a gene~~ reduces memory in said living rat or mouse ~~and wherein somatically transferring is achieved by using an adeno-associated viral vector.~~

Conclusion

Upon entry of the above amendment, Claims 23, 27, 28, and 33 are allowable.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected.
